

Quick Start Guide - 5 Minutes to Running!

Get your Job Assistant up and running FAST!

Step 1: Install Dependencies (2 minutes)

```
bash

# Install Python packages
pip install -r requirements.txt

# Download spaCy English model
python -m spacy download en_core_web_sm
```

Step 2: Configure Environment (1 minute)

Create/Edit your `.env` file with **MINIMUM** configuration:

```
bash

# Just copy this - that's it!
SECRET_KEY=my-secret-key-12345
FLASK_ENV=development
REMOTEOK_API_ENABLED=true
```

This gives you:

-  Basic security
 -  Development mode
 -  Free RemoteOK jobs (no signup needed!)
-

Step 3: Run the App (30 seconds)

```
bash

python app.py
```

You should see:

```
* Running on http://0.0.0.0:5000
```

Step 4: Open Browser (10 seconds)

Go to: <http://localhost:5000>

Step 5: Upload CV (1 minute)

1. Click "Upload CV"
 2. Select your PDF or DOCX resume
 3. Wait for parsing
 4. Click "Search Matching Jobs"
 5. Browse your results!
-

You're Done!

Your app is running with:

-  CV parsing
 -  Job matching
 -  RemoteOK jobs (free remote jobs)
 -  Mock data for testing
-

Want More Jobs? Add APIs! (Optional - 10 minutes)

Quickest Setup (Recommended):

1. Adzuna (Best for local jobs):

- Visit: <https://developer.adzuna.com/>
- Sign up (2 minutes)
- Get App ID & Key
- Add to `.env`:

```
bash
```

```
ADZUNA_APP_ID=your-app-id  
ADZUNA_APP_KEY=your-app-key
```

2. Test Your APIs:

```
bash
```

```
python test_api.py
```

See `API_SETUP_GUIDE.md` for detailed instructions on all APIs.

Make it Globally Accessible (Optional - 2 minutes)

Using ngrok (easiest):

```
bash
```

```
# Download from: https://ngrok.com/download
```

```
ngrok http 5000
```

You'll get a public URL like: `https://abc123.ngrok.io`

Share this URL with anyone - they can access your app while it's running!

Troubleshooting

"Module not found" error:

```
bash
```

```
pip install -r requirements.txt
```

"spaCy model not found":

```
bash
```

```
python -m spacy download en_core_web_sm
```

"No jobs found":

- Check internet connection
- Verify CV has skills (Python, Java, etc.)
- Enable mock data for testing (already included)

Port 5000 in use: Edit `.env`:

```
bash
```

```
PORT=5001
```

Project Structure Check

Make sure you have this structure:

```
job-assistant/
├── app.py
├── requirements.txt
├── .env
├── test_apis.py
├── modules/
│   ├── __init__.py
│   ├── cv_parser.py
│   ├── job_scraper.py
│   ├── matcher.py
│   └── notifier.py
├── models/
│   ├── __init__.py
│   └── database.py
├── static/
│   ├── css/style.css
│   ├── js/main.js
│   └── uploads/
├── templates/
│   └── index.html
└── data/
```

Next Steps

1.  **Running?** Great! Upload a CV and test
2.  **Want more jobs?** Add API keys (see API_SETUP_GUIDE.md)
3.  **Want notifications?** Setup email (see API_SETUP_GUIDE.md)
4.  **Want global access?** Use ngrok (instructions above)
5.  **Want cloud hosting?** See SETUP_INSTRUCTIONS.md

Pro Tips

- **Test with your own CV** first
 - **Skills matter** - more skills = better matches
 - **Mock data included** - so you'll always see some jobs
 - **Check console logs** - helpful error messages there
-

Still Having Issues?

1. Check that all files are in correct folders
 2. Run `python test_apis.py` to verify setup
 3. Look at console output for error messages
 4. Make sure `.env` file exists in root folder
-

Full Documentation

- `API_SETUP_GUIDE.md` - Get free API keys
 - `SETUP_INSTRUCTIONS.md` - Complete setup & deployment
 - Check comments in code files
-

Enjoy your Job Assistant!

Time to find your dream job!
